## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-4 and 9-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention provides a new method and system for encoding and decoding a digital video, which allows use of off-the-shelf DVC coders, decreasing system cost, holding data rate to reasonable range, trading data rate for image quality by allowing the encoder and decoder to communicate using various numbers of video segments per frame and the same DVC coders (see specification, page 19, lines 2-6).

In particular, the new method and system comprise the following features, which the prior art, either taken singly or in combination, does not teach:

- presenting the blocks to the digital video coder as part of a larger, synthesized digital video frame, the blocks inserted into the digital video frame so as to substantially occupy frame locations corresponding to selected video segments in the video segment encoding order of the digital video coder (see independent claim 1);

- a mapper to map blocks of data, from the input frame buffer to a synthesized digital video frame for input to the digital video coder, the blocks of data substantially occupy frame locations of the digital video frame corresponding to selected video segments in the video segment encoding order of the digital video coder (see independent claim 9);

- a data padder to concatenate video segments from the input data buffer with dummy video segments for input to the digital video decoder; and a subframe extractor to map the digital video frame regions corresponding to the video segments supplied from the input data buffer into a reconstructed digital video frame (see independent claim 17).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
